

Miguel Angel Vargas

contact@migueltvargas.dev | migueltvargas.dev | github.com/migueltvargasdev

Skills

Languages: TypeScript, JavaScript, C#, Python, SQL

Frameworks & Libs: ASP.NET Core, React, Node.js, Vue.js, Astro, Jest, Entity Framework

Infrastructure & Tools: Docker, Linux, Git, CI/CD (GitHub Actions, GitLab CI), Claude Code

Database & Cloud: PostgreSQL, Redis, RESTful APIs, AWS (S3/EC2)

Experience

Software Engineer, Invent – Remote

May 2024 – July 2025

- Developed and deployed responsive React microapps by orchestrating data from diverse internal and third-party REST APIs to deliver complex data visualizations for financial services clients
- Redesigned the internal frontend documentation portal using Docusaurus to create a template-driven system for internal and external developers that accelerated onboarding by 90%
- Refactored a legacy CLI tool into an idempotent system with robust input validation and dynamic pathing to eliminate deployment errors and save 8 hours of weekly manual troubleshooting
- Optimized the internal white-label UI library by consolidating fragmented components into Storybook and authoring usage documentation and tests to streamline development for internal and partner teams
- Provided technical consultancy and code reviews for partner developers to facilitate microapp integration, resolving architectural blockers and ensuring alignment with platform API capabilities

Associate Quality Engineer, Proscia – Philadelphia, PA

June 2021 – July 2023

- Managed Quality Management System (QMS) operations using Qualio to ensure organizational compliance and streamline process efficiency across internal teams
- Automated a 3-hour daily compliance workflow by developing Playwright scripts in Python to scrape QMS data and cross-reference employee records against master training plans
- Engineered an auto-remediation system that programmatically assigned missing training files to employees, eliminating manual entry errors and ensuring 100% audit readiness
- Developed a real-time analytics pipeline by exporting automated audit data to Google Sheets and Looker Studio to provide executive leadership with visibility into operational risks

Projects

Health Tracker (Hero: Tales of the Tomes)

app.talesofthetomes.com

- Developed a commissioned React 19 and Typescript Progressive Web App (PWA) as the official digital companion for the board game HERO: Tales of the Tomes
- Implemented complex state management using Zustand to handle multi-player game modes, rotation-aware tap inputs, and dynamic hero-specific stat logic
- Architected a mobile-first, responsive UI supporting native-like installation and offline functionality across iOS, Android, and desktop platforms
- Integrated usage tracking using Umami Analytics to monitor player engagement without compromising user data

Self Destroying Realtime Chat App

chat.migueltvargas.dev

- Engineered a privacy-focused real-time chat platform using Next.js and Redis for high-concurrency message handling and temporary data persistence
- Implemented automatic room destruction logic using Redis TTL to irreversibly wipe all chat history and metadata after 10 minutes
- Developed a high-performance backend using ElysiaJS to handle end-to-end type-safe API routes, optimizing server-side processing and deployment on Vercel

Education

Western Governors University – BS in Software Engineering

March 2024
